

5.1 CHANGING THE FONT

You can change the font type and size for the display of text in the user interface (i.e. browser, search window, editor and viewer).

Procedure

1. Select the **System / Settings / Set font** method.

The **Set font** window will open. Use it to change the font type and size.

2. Under "Font" and "Size", select the desired values.

Under "Font" you will see a list of all the font types, which are installed on the computer and under "Size" you will see all font sizes which you can select. The font sizes are expressed in points (pt).

After you select the values from the drop-down lists, the text *Print example* will be displayed in the selected font type and size.

To return to the default font type (*Arial Unicode MS*) and size (*12*), click the **Default** button.

3. Click the **OK** button.

The new font setting is visible immediately, however, you need to re-log for the COBISS3 software to fully adjust to the new setting.
