## 2 HOME LIBRARY

Upon installation of the COBISS3 software, the object will already be created in the **Home library** class (home library data is downloaded from the COLIB database) within the COBISS3/Application Administration software module. Because the home library data will be displayed as the sender's address on all documents sent to the library's members and partners, enter the data on the home library before you start working with the other modules.

To enter and edit the home library data, you will require the following privilege: *ADM\_PARTNER – Partner data maintenance*.

Subchapters:

- Entering home library data
- Searching for library data in the COLIB database
- Displaying library data in the COLIB database
