

COBISS Lib application

Description of updates in the Holdings module

V14.0, 3–4 February 2024

- In the **Search – Material** search window it is possible to search by ISSN in the smart bar with the use of a barcode reader without entering the prefix BN=.
- For the serials check-in, in the **Search – Bibliographic record** search window, the **ISSN** search field was moved to another position.
- For performed works, changing data in field 996/997 is disabled. A field without an accession number can be deleted. The field with the accession number can be copied to a record for a monograph.
- For the **Load last inventory** method, a message is displayed if there are no inventories in the database.

V13.0.11, 2 December 2023

- Bug fix:
 - when saving data in field 996/997.

V13.0.11, 21 November 2023

- Bug fix:
 - when defining the running number.

V13.0.8, 11 November 2023

- Bug fix:
 - when displaying the log of changes in the fields 996/997.

V13.0.7, 26 October 2023

- When displaying a record in the COMARC format the name of the tab was changed from MARC to COMARC. In the COBISS3 software, the MARC tab remains unchanged as it is possible to display records also in the MARC21 format.
- Bug fix:
 - when opening a record in the COBISS Cat application when downloading a record from COBIB and when editing a limited set of bibliographic data.

V13.0.5, 12 October 2023

- Bug fixes:
 - when searching for material by ISSN,
 - when entering values from the local code lists by random data (from 1 to 10).

V13.0.1, 21 September 2023

- At the same time, you can delete several fields 998, in which you report about the holdings for another library.
