

COBISS Lib application

V14.0, 3–4 February 2024

- In the COBISS Lib user interface, it is possible to select a dark or light theme.
- It is possible to use hotkeys to speed up certain procedures:
 - in the COBISS Lib main window,
 - in the search window,
 - in the Card window.
- In the search window, history and shortcuts it is now possible to use the **Show** functionality even when no records are selected. In this case, once you click the **Show** option, the viewer for the first loaded record is displayed. To move to the next or the previous record, click the **Next** or **Previous** button.
- In the viewer, it is not possible to select a content block and one or several records from an individual block at the same time.
- The display indicating that a procedure is in action was changed (from cogs to a circle).
- In the search window of the content blocks **Bibliographic record** and **COLIB**, the option of adding user attributes was added for the option **Specify and select hit list formats**.
- The permission for pop-up windows now only has to be set up in the Mozilla Firefox browser.
- In the COBISS Lib login window, the reCAPTCHA system was utilised for security reasons.
- Bug fixes:
 - below the COBISS Lib application title bar when displaying the button for quickly switching to other departments;
 - when searching with the operator NOT;
 - in the data editor when selecting options from the drop-down list;
 - when displaying messages about completed tasks in the **Notifications and messages** option;
 - when moving between selected related records in the **Viewer** window.

V13.0.10, 10 November 2023

- Bug fix when taking into account privileges when preparing a data export.

V13.0.1, 21 September 2023

- Bug fix when entering partner data with downloading data from the COLIB database.
