

COBISS Lib application

Description of updates in the Reports module

V14.0, 3–4 February 2024

- In COBISS Lib, it is now possible to sort your favourite records and refresh the list of favourite records. For this purpose, the options **Move up**, **Move down** and **Restore** were added to the context menu.
- If the destination is E-mail, you can now add an attachment with the **Add attachment** option to the destination of each report and the report form.
- For the **Download** option, which enables saving a prepared record locally, a control was added to check the suitability of sending a record in the selected format.
- For the **Data export** option:
 - the functionalities **Add subfield** and **User attributes** were added;
 - in the **Data export – <content set>** window, the display of icons for individual sets is activated;
 - in the **Data export** window, it is possible to select only one content block, from which you wish to export the data.
- Design changes and updates:
 - the content sets in the Reports module are displayed in bold;
 - reorganised sequence of procedures you can perform for your favourite reports;
 - the display of favourite reports on the library and user level is organised in tabs;
 - bibliographies are displayed in a separate tab (up until now, they were in the Data export tab);
 - In the **Overview and sending of created report** window which remains open if the report was not send successfully to one of its destinations;
 - in the **Overview and sending of created reports** window, the position of the icons for individual procedures was changed.

V13.0.7, 26 October 2023

- It is now possible to edit the contents of an e-mail.

V13.0.5, 12 October 2023

- Bug fix:
 - when preparing the reports for the calculation of the number of visits so that the selected report parameters are taken into account.
